Following publication of the original article [1], we were notified of a typo in the 4th paragraph of the “Statistical analyses” section:

- “We computed the variance inflation factor (VIF) and tolerance (1/VIF) for each of the ten predictors included in Model 4 to assess for collinearity. All tolerance values were **less** than 0.1, indicating that each predictor was unlikely to be a linear combination of the others.”

The word **less** should actually read **greater**.
